**Pokyny k vypracování testu:**

# Notification regarding cheating:

§ Every attempt to cheat results in test´s termination, grading “failed”, and suggestion will be given for a disciplinary action

§ Supervisors do not give any warnings, the test is terminated in case of the first sign of cheating.

§ Rules have to be obeyed even if the test is already submitted.

# What we consider as cheating:

§ not putting everything (books, notes...) on the floor

§ escaping from the room

§ looking in the test of someone else

§ speaking- any kind of, including request related to borrowing a pencil, etc. (raise your hand and call the supervisor)

§ the use of USB, a mobile phone, a cheat sheet, a course book, own paper, or other suspicious tools

§ writing of the test for which you are not regularly enrolled

§ the use of saved data from the data calculator

§ and any other suspicious behaviour

# Instructions for the test:

§ In case of each question, select the correct answer. There is only one correct answer.

§ For the correct answer, you will get the number of points listed next to the question. Points are not subtracted for a bad answer.

§ The test takes 90 minutes from the moment you begin.

***IN CZECH:***

# Upozornění na podvodné jednání:

§ Každý pokus o podvod má za důsledek: ukončení testu + hodnocení nevyhověl + návrh na disciplinární řízení.

§ Dozor nedává výstrahy, ale končí testy při prvním problému.

§ Pravidla musíte dodržovat, i když už máte test odevzdaný.

# Co považujeme za podvod:

§ neodložení všech věcí na zem

§ útěk z testu

Sofiia Mandziuk
Zbývá času
01:27:10

§ dívání se do cizího testu

§ mluvení – jakékoli, včetně žádosti o tužku apod. (vždy se nejprve přihlaste a přivolejte dozor!)

§ použití flash disku, mobilu, taháku, učebnice, vlastního papíru a jiné podezřelé pomůcky

§ psaní testu, na který nejste řádně přihlášeni

§ používání uložených dat z datové kalkulačky

§ a další podezřelé jednání

## Pokyny pro psaní testu:

§ U každé otázky vyberte jednu správnou odpověď.

§ Za správnou odpověď dostanete počet bodů uvedený u otázky. Za špatnou odpověď se body neodečítají.

§ Test trvá 90 minut od okamžiku, kdy jej spustíte.

**Způsob vyhodnocení**: Při vyhodnocení jsou započteny jen správné odpovědi.

**Blok otázek National income accounting**

1. Goods and services are valued at market prices when calculating GDP. Because the "outputs" of government are not sold, they have no market prices. In the actual calculation of GDP 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- ○ Their value is estimated from a survey of recipients of these services
- ● They are valued at the cost of producing them
- ○ Their value is estimated from the market prices of similar market-provided services
- ○ None of the given options
- ○ They are valued at zero

2. GDP measures: 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- ○ total income earned by all factors of production, total output of final goods and services, total expenditure on final goods and services, the sum of value-added at all stages in the production of final goods
- ○ total income earned by all factors of production, total output of final goods and services and intermediate goods and services, total expenditure on final goods and services, the sum of value-added only in the production of consumption goods
- ○ total income earned only by capital, total output of final goods and services, total expenditure on final goods and services, the sum of value-added at all stages in the production of final goods
- ○ total income earned by all factors of production, total output of final goods and services, total expenditure only on final consumption goods, the sum of value-

added at all stages in the production of final goods

- total income earned by all factors of production, total output of final goods and services, total expenditure only on capital goods, the sum of value-added only in the production of consumption goods
- total income earned by all factors of production, total output of final goods and services, total domestic expenditure on final goods and services produced only in the domestic economy, the sum of value-added at all stages in the production of final goods
- total income earned only by labor, total output of final goods and services and intermediate goods and services, total expenditure on final goods and services, the sum of value-added at all stages in the production of final goods

**Blok otázek Consumption**

**Pokyny k bloku otázek:**

3. In the textbook Keynesian consumption function C = Ca + cYd, with Ca positive: 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- marginal propensity to consume is increasing
- saving is decreasing with higher income
- consumption is increasing with the interest rate
- consumption is decreasing with higher income
- marginal propensity to consume is decreasing
- marginal propensity to save is always higher than the average propensity to save
- marginal propensity to save is always lower than the average propensity to save

**Blok otázek Consumption**

**Pokyny k bloku otázek:**

4. Laibson has suggested that: 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- psychological effects are important for understanding consumer behavior. People have a weak desire for instant gratification, they may exhibit time-inconsistent behavior and may end up saving more than they would like.
- psychological effects are important for understanding consumer behavior. People have a strong desire for instant gratification, they may exhibit time-consistent behavior and may end up saving more than they would like.
- psychological effects are unimportant for understanding consumer behavior. People have a weak desire for instant gratification, they may exhibit time-consistent behavior and may end up saving less than they would like.

- psychological effects are important for understanding consumer behavior. People have a strong desire for instant gratification, they may exhibit time-inconsistent behavior and may end up saving less than they would like.

**Blok otázek Consumption**

5. Martha obeys two-period Fisher model of consumption. Martha earns 350 in the first period and 250 in the second period. She can borrow or lend at the interest rate of 5 %. Assume that Martha tries to smooth her consumption between both periods. Suppose that her income stream is reversed. Hence she earns 250 in the first period and 350 in the second period. Her optimum saving after this change: 3 b.

Vyberte jen jednu z následujících možných odpovědí.

- increases by 78
- decreases by 88
- decreases by 68
- decreases by 58
- decreases by 98
- increases by 108
- increases by 88
- increases by 68
- decreases by 108
- decreases by 78
- increases by 98
- increases by 58

**Blok otázek Production function**

6. The assumption that output increases with more labor employed in the production process is given by the following mathematical expression: 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- $Y/L>0$
- $\partial K \partial K / \partial L \partial L > 0$
- $F_{LL}>0$
- $\partial F(\cdot)/\partial L>0$
- $\partial F(\cdot)/\partial L<0$

Sofiia Mandziuk
Zbývá času
01:27:10

- ∂F(·)/∂K>0

**Blok otázek Production function**

**Pokyny k bloku otázek:**

7. One list includes only PF with diminishing marginal product of capital: 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- $Y=K^{0.8}L^{0.8}$, $Y=K^{0.9}+L$, $Y=K^{0.4}/L$, $Y=K^{0.2}L^{0.8} + K$
- $Y=K^{0.2}L^{0.8}$, $Y=K+L$, $Y=K^2 + L^2$, $Y=K^{0.2}L^{0.8} + K$
- $Y=L$, $Y=L-K$, $Y=K^{0.9}/L$, $Y=K^{0.2}L^{0.8} + K$
- $Y=K^{0.4}L^{0.4}$, $Y=K+L$, $Y=K^2/L$, $Y=K^{0.2}L^{0.8}$
- $Y=K^{0.8}L$, $Y=K^{0.8}+L$, $Y=K/L$, $Y=K^{0.2}L^{0.8}$
- $Y=K^{0.2}L^{0.8}$, $Y=K+L$, $Y=K/L$, $Y=K^{0.2}L^{0.8} + K$

**Blok otázek Investment**

8. According to the neoclassical model, firms invest: 1 b.

Vyberte jen jednu z následujících možných odpovědí.

- if the rental price is greater than the price level and they disinvest, if the rental price is less than the price level
- if the rental price is lower than the cost of capital and they disinvest, if the rental price is greater than the cost of capital
- if the rental price is greater than the cost of capital and they disinvest, if the rental price is less than the cost of capital
- if the price level is greater than the cost of capital and they disinvest, if the price level is less than the cost of capital
- if the price level is lower than the cost of capital and they disinvest, if the price level is greater than the cost of capital

**Blok otázek Investment**

9. Assume that the entire economy can be described by the Cobb-Douglas production function $\mathbf{Y_t=K_t^{\alpha}L_t^{1-\alpha}}$, where α = 30%, the real interest rate is 4%, the depreciation rate is 6%, and the number of workers is 1,000 (everything at time t). The previous period capital stock is 4,000. The optimum capital stock at time t is roughly: 4 b.

Vyberte jen jednu z následujících možných odpovědí.

- 5,400
- 400
- 4,600

**Blok otázek Classical model**

10. Only one of the following statements is consistent in the (neo)classical model: 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- if the real rate of interest is higher than the equilibrium level, then total saving is equal to investment and the aggregate demand for output exceeds the aggregate supply of output
- if the real rate of interest is higher than the equilibrium level, then total saving falls short of investment and the aggregate demand for output is equal to the aggregate supply of output
- if the real rate of interest is higher than the equilibrium level, then total saving falls short of investment and the aggregate demand for output exceeds the aggregate supply of output
- if the real rate of interest is higher than the equilibrium level, then total saving exceeds investment and the aggregate demand for output falls short of the aggregate supply of output
- if the real rate of interest is higher than the equilibrium level, then total saving exceeds investment and the aggregate demand for output exceeds the aggregate supply of output
- if the real rate of interest is higher than the equilibrium level, then total saving falls short investment and the aggregate demand for output falls short of the aggregate supply of output

**Blok otázek Classical model**

11. Consider an economy in the long run that can be described by the following equations: 5.

$Y = C + I + G$
$Y^* = F(L,K,A) = 7000$
$C = 200 + 0.8Yd$
$I = 700 - 60r$
The real interest rate is given directly in %. Yd is the personal disposable income.

Sofiia Mandziuk
Zbývá času
01:27:10

Government collects 1500 in taxes, builds highways for 1300 and pays retirement benefits for 900.
Now assume that investment pessimism makes business want to invest less. This changes the investment equation to I = 600 - 60r. The interest rate in this economy will:

Vyberte jen jednu z následujících možných odpovědí.

- increase from 4.3 % to 7.7 %
- decrease from 7.3 % to 2.7 %
- increase from 6.3 % to 8.3 %
- decrease from 6.3 % to 3.7 %
- decrease from 5.3 % to 2.7 %
- decrease from 6.3 % to 2.7 %
- increase from 4.3 % to 5.3 %
- increase from 5.3 % to 6.7 %
- increase from 5.3 % to 7.7 %
- decrease from 5.3 % to 3.7 %
- decrease from 7.3 % to 3.3 %
- increase from 6.3 % to 10.3 %

**Blok otázek Open Economy**

12. In a large open economy, an increase in government purchases or a reduction in taxes causes 1 b.

Vyberte jen jednu z následujících možných odpovědí.

- a decrease in national saving
- a reduction in net foreign investment
- an increase in the real interest rate
- all of the listed
- real appreciation of domestic currency

13. Only one of the following statements is consistent in the (neo)classical open economy model: 1 b.

Vyberte jen jednu z následujících možných odpovědí.

- if the aggregate absorption is lower than the produced output, then net exports are positive and the world real interest rate is very high
- if the aggregate absorption is higher than the produced output, then net exports are negative and the world real interest rate is very high

Sofiia Mandziuk
Zbývá času
01:27:10

- if the aggregate absorption is lower than the produced output, then net exports are negative and the world real interest rate is very low
- if the aggregate absorption is lower than the produced output, then net exports are negative and the world real interest rate is very high
- if the aggregate absorption is higher than the produced output, then net exports are positive and the world real interest rate is very high
- if the aggregate absorption is higher than the produced output, then net exports are positive and the world real interest rate is very low

**Blok otázek Open Economy**

14. Consider a small open economy (SOE) that uses a fixed exchange rate regime. Suppose that the marginal product of capital declines in this country due to an important technological decay. According to the long run (neo)classical model, the long run consequences in this SOE are as follows: 2 b.

Vyberte jen jednu z následujících možných odpovědí.

- the domestic price level of the SOE decreases, net exports will not be affected, total exports will rise by the same amount as total imports
- the domestic price level of the SOE decreases, net exports will increase, total export will fall less than total imports
- the domestic price level of the SOE decreases, net exports will decrease, total exports will fall and total imports will rise
- the domestic price level of the SOE decreases, net exports will increase, total exports will rise and total imports will fall
- the domestic price level of the SOE decreases, neither total exports nor total imports will be affected
- the domestic price level of the SOE increases, neither total exports nor total imports will be affected
- the domestic price level of the SOE increases, net exports will decrease, total exports will fall and total imports will rise
- the domestic price level of the SOE increases, net exports will not be affected, total exports will increase by the same amount as total imports
- the domestic price level of the SOE increases, net exports will increase, total exports will rise and total imports will fall
- the domestic price level of the SOE increases, net exports will decrease, total export will decrease more than total imports
- the domestic price level of the SOE increases, net exports will decrease, total exports will rise and total imports will fall
